Real advice for car buyers including reviews, news, price, specifications, galleries and videos.

This book criticizes the widespread view that the 1997 Asian crisis was due to 'crony capitalism' and puts the blame instead on misguided liberalization. It analyzes the case of Korea's business conglomerates, the chaebol, with particular attention to the car industry, to show how liberalization contributed to the crisis even at the level of the firm. It shows how those firms that had developed innovative capabilities survived the crisis much better than those that had merely expanded into markets opened up by liberalization.

This book examines the experiences of the globalizing Korean automobile industry, with particular focus on the Hyundai Motor Company (HMC), one of the most prominent of the new Korean multinational corporations. It provides an overview of the changing nature of the global automobile industry, before considering in depth the globalization processes that the Korean automobile industry has undertaken. Tracing the development of HMC as it recovered from the failure of its first venture overseas, in Canada, and tried again in India, the authors explore the similarities and differences between the practices which HMC implemented in India and Korea. They highlight the importance of production systems and employment relations as part of HMC's growth, and argue that if Korean companies such as HMC are to compete successfully as global automobile producers they will need to increase the proportion of overseas

Korea's economic success has inspired numerous studies and research projects in past decades. Despite good efforts to analyze the strategy of Korea, earlier studies have not been able to comprehensively and systematically explain the country's "miraculous" growth. After thorough analysis of these earlier studies, a new model has been developed by showing that a country or firm does not have to be more innovative or possess more resources to have a competitive advantage over others. In *The Strategy for Korea's Economic Success*, Hwy-Chang Moon details four factors that comprise the ABCD model and illustrates how the Korean government, corporations, and people have exemplified these factors in achieving their current level of success. The four factors are agility (speed + precision), benchmarking (learning + best practices), convergence (mixing + synergy), and dedication (diligence + goal-orientation). Together, these factors have enabled Korea's economic success and will continue to drive the next level of growth. Anyone can become more competitive with proper implementation of the ABCDs. Korea's development strategy holds special value, because it is more practical and

appropriate for many developing countries. For more developed countries, on the other hand, the ABCDs can be used to fast-track the next phase of growth. Moon also highlights the role of internationalization in broadening the scope of strategic choices, and shows how the combined implementation of internationalization and the ABCDs deepens the pool of strategic resources.

As the markets in transitional economies open and grow, major challenges and opportunities arise for multinational firms entering these markets, local firms facing these new competitors, and policymakers seeking to increase the ability of all firms to compete fairly and efficiently. Yet despite the important questions transition economies pose for policymakers and companies seeking to enter and compete in these new markets, there has been a relative absence of systematic research on these concerns. This book seeks to fill a gap in the existing literature by offering a pioneering and comprehensive examination of issues that have developed as markets in transitional economies become more deregulated and open. The countries discussed include China, the Czech Republic, Hungary, India, Poland, Romania, Russia, South Africa and South Korea. The topics covered are divided into five main sections, and the individual chapters are written by some of the world's leading academic experts on these issues. Most of the authors draw from freshly-collected data in new studies of consumers and/or firms in transitional economies. After an opening section which discusses the marketing

issues and challenges multinational and local firms face in transitional economies, the next three sections offer detailed treatments of changing consumer behavior, measuring and improving the marketing orientation of firms, and implementing and managing distribution channels. The fifth and final section is devoted to firm strategies and tactics, examined variously from the perspective of multinational firms entering these new markets, from the viewpoint of existing local firms facing new competitive challenges from global entrants, and from the perspective of local firms seeking to establish themselves in foreign markets where they have not previously competed. Most of the individual chapters are revised versions of papers originally presented at a conference sponsored by the William Davidson Institute, which focuses on research related to emerging and transitional economies, and have not previously appeared in published form. Thus, the book is a unique collection of cutting-edge scholarship on the various aspects of marketing in transitional economies. It will prove valuable reading to academics, policymakers, and international business strategists.
