Pathology Outlines - Endosalpingiosis

Although both endometriosis and endosalpingiosis are speculated to derive from the secondary müllerian system 3, 4, the demographics and clinical presentation of these two diseases was found to be very different in the present study.

What is endosalpingiosis? - ScienceDirect

Endosalpingiosis can be a painful reproductive condition. It is similar to endometriosis, but instead of endometrial-like tissue as occurs in endometriosis, tissue from the fallopian tubes is found outside of the tubes and elsewhere in the pelvic cavity, and may cause pain, infertility, both, or neither.

lined by tubal-type epithelium. It differs from endometriosis (EM) in that it has ciliated glandular epithelium, no endometrial stromal component, and does not exhibit an inflammatory response.

Prevalence of endosalpingiosis and other benign ...

CONCLUSION: Endosalpingiosis is the second most common cause of peritoneal proliferation in the lower abdomen, with histologic evidence of the disorder in more than 7% of premenopausal women. In contrast to endometriosis, endosalpingiosis plays only a minor role in the evaluation of infertility and lower abdominal pain.

occurring in association with ovarian serous neoplasms. It is generally not recognised by gynaecologists at the time of laparoscopic evaluation or is misdiagnosed as endometriosis. Macroscopically, this disease is usually not discernable.

Endosalpingiosis, an unrecognized condition: report and ...

Endosalpingiosis is diagnosed by a pathologist on excision (e.g. biopsy). It is characterized by cysts with tubal-type epithelium (e.g. ciliated epithelium) surrounded by a fibrous stroma. It is not often associated with hemorrhage. A tubal-type epithelium surrounded by endometrial-type stroma is a variant of endometriosis, not endosalpingiosis.

Endosalpingiosis - Wikipedia
