The Acoustic Research Center Terminal at NRL (ARCTAN) was established by DARPA to provide ARPA personnel and contractors the capability of accessing the Acoustic Research Center (ARC) at Moffett Field, California from the Washington, D.C. area. The ARCTAN facility permits local users at the Naval Research Laboratory (NRL) to access the ARC via a secure subnet of the ARPANET. During such times, the ARCTAN is a server/user host on the classified subnet of the ARPANET. This report describes the ARCTAN system and its use. The first section gives an overview of the ARCTAN facility. The second section describes the procedures required by a user to access the ARC and use the capabilities of the ARCTAN terminal. The third section describes the procedures to be followed by an operator to put the ARCTAN on the ARPANET as a secure host and to remove it from the net.

The comprehensive Sandlin's Textbook of Hearing Aid Amplification, now in its third edition, provides the hearing health professional with an overview of the technological advances related to hearing aid devices. The authors give particular emphasis to the most current advances in clinical assessment techniques and hearing instrument technology, and provide a detailed analysis of the application of digital signal processing. Clinical insights into the psychology of hearing health are included to help professionals meet clients' emotional as well as acoustic needs. This is a valuable text for academic and clinical professionals involved in the selection and fitting of hearing aid devices for the acoustically impaired. New to the third edition: Updated chapters on earmold and earshell acoustics; principles and applications of high-fidelity amplitude compression; and microphone technology. Major revisions to chapters on digital signal processing; hearing aid selection, fitting, and verification; mathematical formulae for applying amplification; measures of validity and verification; and surgically-implanted hearing devices for unilateral hearing loss. Discussion of distribution methods; considerations for treating children; elements of design and implementation of DSP circuits; the evolution from analog to digital hearing aids; and future consideration for the field.
