predecessors gradually evolved into the twin sciences of animal ecology, the study of the interactions between an animal and its environment, and ethology, the biological study of animal behaviour.

Animal behaviour - History and basic concepts | Britannica  
Ethology can be contrasted with comparative psychology, which also studies animal behaviour, but construes its study as a branch of psychology. Thus where comparative psychology sees the study of animal behaviour in the context of what is known about human psychology, ethology sees the study of animal behaviour in the context of what is known about animal anatomy and physiology.
