 Structural health monitoring in bridge engineering is the tracing of the structural conditions of the bridge based on four major categories of physical quantities, namely: environmental loads and status, operation loads, bridge features and bridge responses by reliable on-structure instrumentation system and effective evaluation tools. In the past decade, structural health monitoring system has been adopted to monitor and evaluate the structural health conditions of cable-supported bridges ...

 President, Institute of Civil Engineers, 1967. Author of The World's Great Bridges. Bridge, structure that spans horizontally between supports, whose function is to carry vertical loads. The prototypical bridge is quite simple—two supports holding up a beam—yet the engineering problems that must be overcome even in this simple form are inherent in every bridge: the supports must be strong enough to hold the structure up, and the span between supports must be strong enough to carry the loads.

 In the most simplistic terms, an H-bridge circuit can switch the polarity of the attached load. The most common use of an H-bridge is to drive a DC motor, allowing directional control. There are various H-Bridge designs, and some use discrete components consisting of MOSFETs, while other designs utilize a dedicated Integrated Chip (IC) H-bridge.

 An H-bridge is built of four switches that control the flow of current to a load. In the image above, the load is the M connecting the two sets of switches. Using one current source, you can drive current in two directions by closing two switches. If Switch 1 and 4 are closed, then the current will flow from the left to right on this image:

 A bridge can be categorized by what it is designed to carry, such as trains, pedestrian or road traffic (road bridge), a pipeline or waterway for water transport or barge traffic. An aqueduct is a bridge that carries water, resembling a viaduct, which is a bridge that connects points of equal height. A road-rail bridge carries both road and rail traffic.
