The Genesis creation narrative is the creation myth of both Judaism and Christianity. The narrative is made up of two stories, roughly equivalent to the first two chapters of the Book of Genesis. In the first, Elohim (the Hebrew generic word for God) creates the heavens and the Earth in six days, then rests on, blesses and sanctifies the seventh (i.e. the Biblical Sabbath).

B) 2:29 describes the creation of the earth and its features while 79:27-31 only describes the spreading of the earth. Thus, based on the two verses we know two things: 1. The creation of the earth preceded the formation of the heavens into seven layers 2. The creation of the heavens preceded the 'spreading' of the earth.

The Huainanzi has in recent years been recognized by scholars as one of the seminal works of Chinese thought at the beginning of the imperial era, a summary of the full flowering of early Taoist philosophy. This book presents a study of three key chapters of the Huainanzi, "The Treatise on the Patterns of Heaven," "The Treatise on Topography," and "The Treatise on the Seasonal Rules," which collectively comprise the most comprehensive extant statement of cosmological thinking in the early Han period. Major presents, for the first time, full English translations of these treatises. He supplements the translations with detailed commentaries that clarify the sometimes arcane language of the text and presents a fascinating picture of the ancient Chinese view of how the world was formed and sustained, and of the role of humans in the cosmos.

As we see a shift of old forms that were once the foundations of our daily lives, parents--who

must prepare the next generation to meet the changing world--have more questions today than ever before. Although our cultural values and family structures may change, it is the atmosphere in the home that continues to form the foundation of a child's life. In Heaven on Earth, parent and educator Sharifa Oppenheimer reveals how parents can make the home environment warm, lively, loving, and consistent with their highest ideals. Heaven on Earth balances a theoretical understanding of child development with practical ideas, resources, and tips that can transform family life. Readers will learn how to create the regular life rhythms needed to establish a foundation for learning; how to design indoor play environments that allow children the broadest development of skills; and how to create outdoor play spaces that encourage vigorous movement and a wide sensory palette. Through art, storytelling, and the festival celebrations, this book is an invaluable guide to building a "family culture" based on the guiding principle of love--a culture that supports children and encourages the free development of each unique soul. Sharifa Oppenheimer offers a gift from the heart. Heaven on Earth is a practical, inspiring resource that brings the author's informed, intuitive understanding of young children into the heart of the home. "Sharifa Oppenheimer has given the world a great gift in the pages of this book. The important child-development information is exquisitely combined with the best 'How-to's' I have seen in any book for parents. Her book, is a ready guide that insures joyful, enthusiastic children who learn easily and contribute to their families and society for a lifetime. I have delighted in every page and feel this is absolutely A must read for parents, grandparents, teachers, and perhaps everyone who will ever touch the life of a child." --Carla Hannaford, Ph.D., biologist and international educational consultant to 32 countries and author of Smart Moves: Why Learning Is Not All in Your Head and Awakening the Child Heart,

Handbook for Global Parenting "This delightful book will be a wonderful resource for parents. They will certainly appreciate its warm, friendly, personal, and reassuring tone. I would have loved such a book when I was a young mother! For those whose children already attend Waldorf programs, it provides a helpful resource for creating a bridge between home and kindergarten. For others, this lovely book offers wonderful glimpses into the wise and nurturing practices of Waldorf early childhood education. In a world where childhood is increasingly 'media'ted and 'adult'erated, this book offers much-needed support for the protection of childhood. " --Susan Howard, chairperson, Waldorf Early Childhood Association of North America and coordinator, International Association for Steiner/Waldorf Early Childhood Education "Being a parent is a challenging assignment, but with the help of Sharifa Oppenheimer's book, Heaven on Earth, our work immediately becomes easier. This book is both heartfelt and practical. It offers sound parenting principles with down-to-earth examples of how to raise children with both insight and grace." --Jack Petrash, director, Nova Institute, and author, Navigating the Terrain of Childhood: A Guidebook for Meaningful Parenting and Heartfelt Discipline

One of the most significant events in the history of Western civilization was the cosmological revolution of the 16th and 17th centuries. Among the most salient factors in this change, described by Alexandre Koyré as the 'destruction of the cosmos' inherited from ancient Greece, were Copernican heliocentrism and the substitution of a homogeneous universe for the hierarchical cosmos of the Platonic and Aristotelian tradition. Starting with a new approach to the issue of the presence of Islamic astronomical devices in Copernicus' work and a

thorough reappraisal of the cosmological views of Paracelsus, the book deals mainly with the abolition of cosmological dualism and the ways in which it affected the decline of astrology over the 17th century. Other related topics include planetary order and theories of world harmony, the cause of planetary motion in the Tychonic world system or the discussion on comets in Germany through the first presentation of a manuscript treatise by Michael Maestlin on the great comet of 1618.

There s a difference between standard of living and quality of life. "

Drawing on a vast array of scholarship, this pioneering text illustrates how profoundly astronomical phenomena shaped ancient Chinese civilization.

The concept of yinyang lies at the heart of Chinese thought and culture. This book explores the relationship between these two opposing forces.

That bad things happen to good people was as true in early China as it is today. Franklin Perkins uses this observation as the thread by which to trace the effort by Chinese thinkers of the Warring States Period (c.475-221 BCE), a time of great conflict and division, to seek

reconciliation between humankind and the world. Perkins provides rich new readings of classical Chinese texts and reflects on their significance for Western philosophical discourse.

'What Fauber does well is humanize these four residents of the pantheon of science... The story is seldom less than fascinating. A readable, enjoyable contribution to the history of science.' - Kirkus An intimate examination of a scientific family - that of Nicolaus Copernicus, Tycho Brahe, Johannes Kepler and Galileo Galilei. Fauber juxtaposes their scientific work with insight into their personal lives and political considerations, which shaped their pursuit of knowledge. Uniquely, he shows how their intergenerational collaboration made the scientific revolution possible. These brave scientists called each other 'brothers', 'fathers' and 'sons', and laid the foundations of modern science through familial co-work. And though the sixteenth century was far from an open society for women, there were female pioneers in this 'family' as well, including Brahe's sister Sophie, Kepler's mother, and Galileo's daughter. Filled with rich characters and sweeping historical scope, this book reveals how the strong connections between these pillars of intellectual history moved science forward.
