"The AHM is a field-reference publication that contains recommended industry standards and procedures covering airside safety, load control, baggage, cargo and mail handling, aircraft movement control, aircraft loading, departure control systems, functional requirements for ground support equipment, an extensive listing of aircraft doors and ground servicing points by aircraft type, as well as the latest IATA Standard Ground Handling Agreement (SGHA) amendments. The AHM is published annually in English only. The AHM is your definitive source for the latest industry-approved policies and standards covering all facets of safe and efficient airport operations." -- Publisher's website.

This volume looks at the operational standards and obligations in civil aviation, and the consequences of failure to comply with them. It covers a wide range of topics both international and complex in measure.

1998 had seen further efforts by the European Commission to reduce the number of natural monopolies in the air transport market. The Council of the EU discussed a Directive aimed at regulating airport practices by limiting the level of charges,

putting an end to unfair practices and improving transparency for users. At the same time, the Commission set conditions on airline alliances after having carried out investigations into several alliances between EU and US carriers. Another significant issue in 1998 has been the review of conditions of carriage and tickets in consultation with the Commission and with consumer organisations, as well as the proposal for a revision of Regulation No. 895/91 regarding denied boarding compensation. Also in high profile during 1998 has been the proposal for a multilateral treaty between the EU and Eastern European countries regarding the adoption of the air law regime of the EU and EU competition law, which would create a common European aviation area. These various developments have provided the principal topics for discussion at the Association's annual conference for 1998.

In this third edition the chapters have been enhanced to reflect changes in technology and the way the air transport industry runs. Key topics that are newly addressed include low cost airline operations, security issues and EASA regulations on airports. A new chapter covering extended details about wildlife control has been added to the volume.

FLINS, originally an acronym for Fuzzy Logic and Intelligent Technologies in Nuclear Science, is now extended to include Computational Intelligence for applied research. The contributions of the FLINS conference cover state-of-the-art research, development, and technology for computational intelligence systems, with special focuses on data science and knowledge engineering for sensing decision support, both from the foundations and the applications points-of-view.
