Changes and additions to the new edition of this classic textbook include a new chapter on symmetries, new problems and examples, improved explanations, more numerical problems to be worked on a computer, new applications to solid state physics, and consolidated treatment of time-dependent potentials.

This book is the crown gem of the Society of Children's Book Writers and Illustrators publications. It contains virtually all the information you will need about writing and illustrating for the children's book market. It will help you chart your creative work from inception all the way through the process of publishing and marketing. THE BOOK includes the latest market reports, articles on social media, discussions of emerging publishing options, and up-to-the-minute directories of everything from agents to book reviewers to relevant blog sites. Time-sensitive material contained in THE BOOK is updated regularly on our website, scbwi.org. The SCBWI staff takes great pride in presenting you with this invaluable tool that will optimize your career, whether you are already well published or a newcomer to the field. Use it as your primary reference and workbook. THE BOOK is available to current SCBWI members only. Make sure when you order your copy that your name in the shipping address matches your member name so that we can confirm your membership. Members may only order one book at a time.

Approximately five years have elapsed since the Conference on "Tick-borne Diseases and their Vectors" (Wilde, 1978, University of Edinburgh) was held at the Centre for Tropical Veterinary Medicine in Edinburgh. Theileriosis was one of the main topics at that Conference and some 20 scientific presentations were given. Also in the same year a Workshop on "Theileriosis" was held at the Kenyatta Conference Centre in Nairobi (Henson & Campbell, 1977, IDRC, Ottawa). Both of these meetings provided a valuable up dating of theilerial diseases, and the Proceedings have been a constant source of reference for scientists in the ensuing years. The meetings played a significant role in setting the scene for a number of important advances which have been made since then. In February of this year, attention was focused on these advances when nearly 200 scientists from over 30 countries were assembled at the International Laboratory for Research on Animal Diseases in Nairobi for the international conference on "Advances in the Control of Theileriosis". The interest and concern shown in this subject has now grown to the extent that more than 70 scientific presentations were given over the course of a very busy week. An important facet of the Conference was the attention given to the control of Theileriosis, since this must be the ultimate aim of all those involved with the disease. Control will be difficult.

Provides a thorough discussion of AI's theoretical foundations and advanced applications, including expert system design and knowledge-based programming. It is a wealth of advanced AI topics and applications that should appeal to a broad audience.

"Fascinating.... Lays a foundation for understanding human history."—Bill Gates In this "artful, informative, and delightful" (William H. McNeill, New York Review of Books) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, Guns, Germs, and Steel chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human history. Winner of the Pulitzer Prize, the Phi Beta Kappa Award in Science, the Rhone-Poulenc Prize, and the Commonwealth club of California's Gold Medal.

This text covers the basic techniques and applications of engineering economy for all disciplines in the engineering profession. The writing style emphasizes brief, crisp coverage of the principle or technique discussed in order to reduce the

time taken to present and grasp the essentials. The objective of the text is to explain and demonstrate the principles and techniques of engineering economic analysis as applied in different fields of engineering. This brief text includes coverage of multiple attribute evaluation for instructors who want to include non-economic dimensions in alternative evaluation and the discussion of risk considerations in the appendix, compared to Blank's comprehensive text, where these topics are discussed in two unique chapters.

Meat is both a major food in its own right and a staple ingredient in many food products. With its distinguished editors and an international team of contributors, Meat processing reviews research on what defines and determines meat quality, and how it can be maintained or improved during processing. Part one considers the various aspects of meat quality. There are chapters on what determines the quality of raw meat, changing views of the nutritional quality of meat and the factors determining such quality attributes as colour and flavour. Part two discusses how these aspects of quality are measured, beginning with the identification of appropriate quality indicators. It also includes chapters on both sensory analysis and instrumental methods including on-line monitoring and microbiological analysis. Part three reviews the range of processing techniques that have been deployed at various stages in the supply chain. Chapters include the use of modelling techniques to improve quality and productivity in beef cattle production, new decontamination techniques after slaughter, automation of carcass processing, high pressure processing of meat, developments in modified atmosphere packaging and chilling and freezing. There are also chapters on particular products such as restructured meat and fermented meat products. With its detailed and comprehensive coverage of what defines and determines meat quality, Meat processing is a standard reference for all those involved in the meat industry and meat research. Reviews research on what defines and determines meat quality, and how it can be measured, maintained and improved during processing Examines the range of processing techniques that have been deployed at various stages in the supply chain Comprehensively outlines the new decontamination techniques after slaughter and automation of carcass processing

"This text is unique in demonstrating clearly the linkages between corporate strategy, organisational behaviour and the management of change. This is an ideal undergraduate text that will also be valuable for experienced managers on masters programmes." David Buchanan, Professor of Organisational Behaviour, Cranfield School of Management "This is the essential and definitive text on change management. It integrates the vast sweep of organisational theory and practice in a highly readable way. Every student and practitioner must have this." Michael Griffin, Director of Human Resources, King's College Hospital NHS Trust Globalisation. Mergers and Acquisitions. New technologies. New competitors. Rapid growth. Rapid decline. Economic boom. Financial crisis. In order to maximise their success, organisations today need to adapt to a turbulent environment. Yet one of the world's leading consultancies, Bain & Co, claims that the failure rate of change management projects is around 70 per cent. Managing change is not easy. The purpose of this leading textbook is to help you understand and consider the theoretical approaches to change and to make sense of these in the light of practical examples. Managing Change is written for students on modules covering management, strategy and organisational change as part of undergraduate and postgraduate programmes.
