Description. LT1 and LV1 are the two types of engines in the LLI series. They are both air-cooled direct injection diesel engines and are built with a cast iron crankcase for durability and have large bearing surfaces for low bearing loads and long life. They are air-cooled by means of a highly efficient flywheel mounted fan and are designed for continuous operation in ambient up to 125 degrees.

Engines - Lister LT1 problems ... that concerns me because it is never a good idea to grind on the seats of one of these tiny Lister engines. The question I have for you is; "How deep is your valve recess now?" In a tiny displacement like the LT, valve recess will have a large impact on overall chamber volume and thereby change the compression ...

This volume had its origin at a conference held in 1978 at the East- West Center that considered the short- and long-term energy problems of the Asia-Pacific region. That group of national energy policymakers, scientists, and technologists agreed that providing adequate energy for the rural areas of the developing countries looms large as one of the more critical problems of the region. Encouraged by this consensus, the East-West Resource Systems Institute obtained a grant from the Agency for International Development for the purpose of initiating a collaborative, multi-country study of rural energy problems. The National Research Council of Thailand and the East-West Center agreed to work closely together as twin foci for the coordination of the effort.
