Beginning with your role as a business consultant in the blueprint phase, the book progresses through to your role as a techno-functional expert during the realization stage. This approach helps you anticipate challenges and gives you the tools to handle them. Going beyond the standard SAP SRM scenarios, this book gives you practical tips for enabling complex customer requirements by leveraging SAP NetWeaver and SAP Business Suite applications. You can also use this reference as a troubleshooting guide to quickly resolve potentially costly implementation challenges. This book presents the complete guide for readers to understand the applications, and pros and cons of nanotechnology applications in environmental remediation, although there are few critical reviews and textbooks available on environmental biotechnology. Water pollution has become one of the biggest concerns of the world. After the industrialisation and urbanisation, environmental pollution has become an enormous concern. Water pollution results in biomagnifications by entering the food chain. As a result water pollution and its risks need to be considered seriously and solutions need to be researched. This volume looks into such topics as bioremediation, nanobiotechnology, biosensors, and enzyme degradation to find solutions to these problems.
